

## 3M<sup>SM</sup> Health Care Academy

# What's new in the 4th Edition of the ADA Guidelines for Infection Prevention & Control?

Effective infection prevention and control is essential to delivering high quality health care for patients and a safe working environment for dental professionals. This webinar will provide an overview of the changes in the 4th Edition following updates to the infection control framework documents published by the CDNA, NHMRC and Standards Australia. Furthermore, the speaker will also examine retrospective examples of quality assurance case studies and the clinical reasoning behind the importance of documentation of the processes defining sterilisation safety.

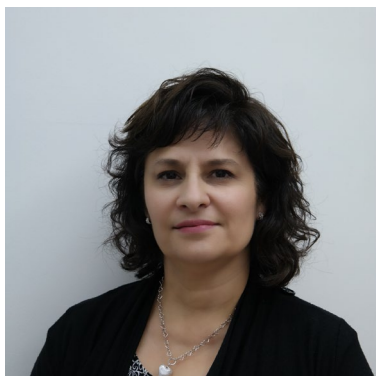

### Objectives:

- Key Infection Control framework documents and their implications to the Dental Setting
- Describe Registered Practitioner Responsibilities (CDNA Guideline)
- Discuss when to use transmission-based precautions in general practice (NHMRC)
- Identify the common gaps and improving sterilisation best practice in the dental environment
